

DEVALVING TOOLS

Based on the cylinder valve (CGA 600 , C10) we offer two types of Devalving Tool.

The devalving tools provide an effective tool to dislodge/disable valves on empty gas cylinders, thus providing the safe disposal of the cylinder. We recommend devalving tools be used on empty cylinders, though ports on the devalving tool will allow any residual or excess gas to be expelled safely. The CGA600 and C10 attachments move freely on the handle to allow the threaded parts to work efficiently and connect to the cylinder properly with no cross threading.

Cylinder Outlet	CGA 600	C 10
Cylinder Compatibility	17 & 34 Liter Steel Cylinder	103 Liter Steel Cylinder, 34, 58 & 116 Liter Alum Cylinder
Material	Stainless Steel	Stainless Steel
Height	2 "	2 "
Width	0.5 "	0.5 "
Length	3 "	3 "
Thread Type	Female / Internal	Male / External
